Ideation Phase
Brainstorm & Idea Prioritization Template

Team ID	SWTID-2026-7816
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within the team to participate in the creative thinking process that leads to problem solving. For the Auto Ticket Classification project, the team prioritized volume over value, welcomed out-of-the-box ideas for classifying school IT tickets, and built on each other's ideas.

This template was used in the team's brainstorming session to shape ideas for automating ticket classification and caller notification with ServiceNow Flow Designer.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Before you collaborate (10 minutes)	**Define your problem statement (5 minutes)**
A. Team gathering: the four team members who built theIncident WorkFlow table and the flow joined the session. B. Set the goal: decide how incoming school IT ticketscan be classified and acknowledged without manual work. C. Learn the facilitation tools and the key rules ofbrainstorming.	PROBLEM How might we automatically classify school IT helpdesk tickets (Wi-Fi, Projector, Password, Slow Computer) and notify the caller, so that IT staff no longer sort every ticket by hand?

Key rules of brainstorming

- Stay on topic (ticket classification).
- Defer judgment.
- Go for volume.
- Encourage wild ideas.
- Listen to others.
- If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm (10 minutes): each team member wrote down ideas that address the problem statement.

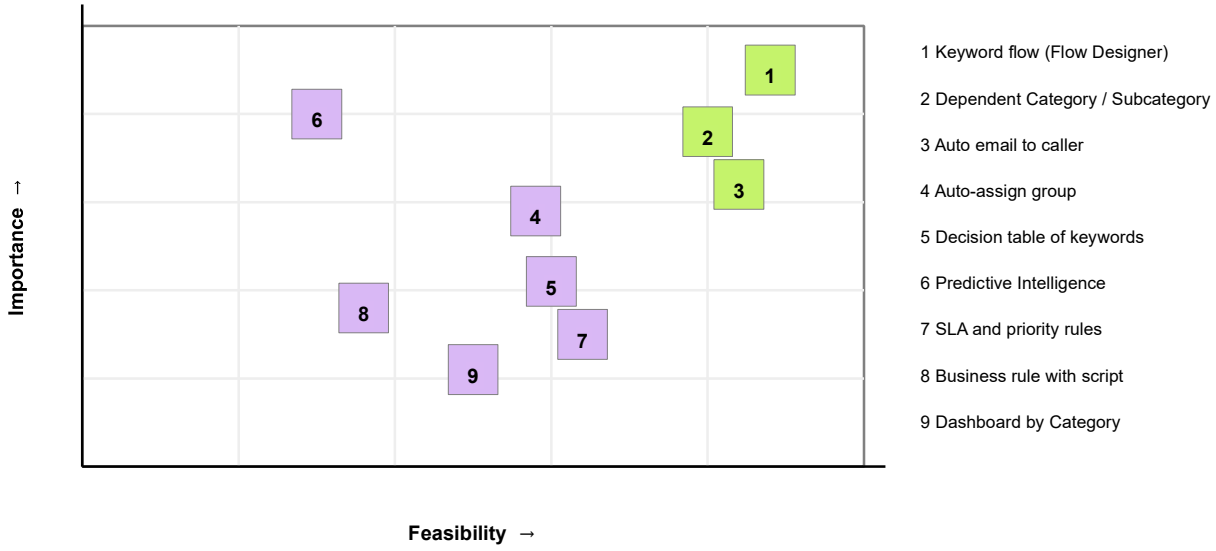

Keerthana K	SAANJANA T S	Thilagavathi K	Harini J
Keyword flow in Flow Designer	Business rule with script	Auto-assign group on Category	Keyword lookup / decision table
Dependent Category / Subcategory	Predictive Intelligence (ML)	SLA and priority rules	Resolution email to caller
Auto email to caller	Dropdown-only ticket form	Suggest KB article for passwords	Dashboard of tickets by Category

Group ideas (20 minutes): similar ideas were clustered and each cluster was given a label.

A. Classification approach	Keyword flow in Flow Designer, keyword lookup / decision table, business rule with script, Predictive Intelligence (ML)
B. Clean data	Dependent Category / Subcategory, dropdown-only ticket form, auto-numbered structured fields
C. Communication	Auto email to caller, resolution email to caller
D. Routing and insight	Auto-assign group on Category, SLA and priority rules, suggest KB article for passwords, dashboard of tickets by Category

Step-3: Idea Prioritization

Prioritize (20 minutes): ideas were placed on the grid by importance (impact on reducing manual effort) and feasibility (cost, time, effort, complexity).

Selected for implementation (high importance, high feasibility): 1. Keyword flow in Flow Designer, 2. Dependent Category / Subcategory choices, 3. Automatic email to the caller. The remaining ideas are listed as future scope.
