Ideation Phase Define the Problem Statements

Team ID	SWTID-2026-7816
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand the customer's point of view for the school IT helpdesk. The Customer Problem Statement template helps the team focus on what matters to students, teachers and IT staff so that the support experience is fast, clear and reliable.

A well-articulated problem statement allows the team to find the ideal solution for the challenges faced by helpdesk users. Throughout the process, it also helps the team empathize with callers who raise Wi-Fi, projector, password and slow computer issues, and with IT agents who must classify every ticket by hand, which leads to the idea of automatic ticket classification using ServiceNow Flow Designer.

I am	*Describe customer with 3-4 key characteristics who are they?*	A school IT helpdesk agent who receives many incident tickets from students and teachers every day
I'm trying to	*List their outcome or "job" the customer is trying to achieve*	Identify each issue quickly and select the correct category and subcategory so the ticket reaches the right team
but	*Describe what problems or barriers stand in the way*	Every ticket must be read and classified manually, and callers are not told that their ticket was received
because	*Enter the "root cause" of why the problem or barrier exists*	There is no automation that reads the Short Description and assigns Category, Subcategory and a confirmation email
which makes me feel	*Describe the emotions from the customer's point of view*	Overloaded, worried about wrong categories, and unable to keep up as requests increase

Example:

I am	I'm trying to	But	Because	Which makes me feel
a student	report that the Wi-Fi is not working	I get no confirmation that my ticket was received	tickets are classified and acknowledged manually	Frustrated

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A school IT helpdesk agent	Classify incoming tickets (Wi-Fi, Projector, Password, Slow Computer) and route them quickly	I have to read and categorize every ticket by hand	There is no automation that analyses the ticket's Short Description	Overloaded and worried about wrong categories

PS-2	A student or teacher (caller)	Report an IT issue and know that it has been received	I get no confirmation and my ticket may be categorized late or wrongly	Notification and classification are done manually by IT staff	Anxious and frustrated
