Project Design Phase-II
Technology Stack (Architecture & Stack)

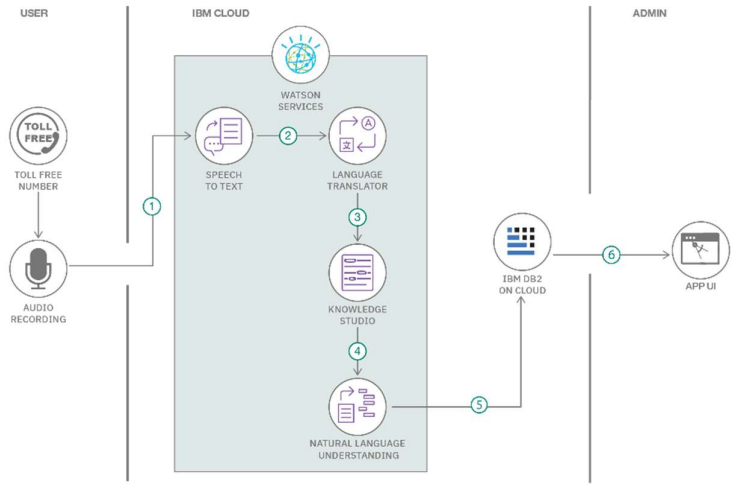

Team ID	SWTID-2026-7816
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Example: Auto Ticket Classification using Flow Designer

Reference: ServiceNow Flow Designer

Guidelines:

- Include all the processes (As an application logic / Technology Block)
- Provide infrastructural demarcation (Local / Cloud)
- Indicate external interfaces (third party API's etc.)
- Indicate Data Storage components / services
- Indicate interface to machine learning models (if applicable)

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1	User Interface	How user interacts with application e.g. Web UI, Mobile App, Chatbot etc.	ServiceNow Self-Service Portal / ServiceNow UI
2	Application Logic-1	Logic for a process in the application	ServiceNow Flow Designer
3	Application Logic-2	Logic for a process in the application	Keyword-based ticket classification
4	Application Logic-3	Logic for a process in the application	Email notification flow
5	Database	Data Type, Configurations etc.	ServiceNow Incident / Task data
6	Cloud Database	Database Service on Cloud	ServiceNow platform database
7	File Storage	File storage requirements	Not specified in the Auto Ticket Classification source
8	External API-1	Purpose of External API used in the application	Not specified in the Auto Ticket Classification source
9	External API-2	Purpose of External API used in the application	Not specified in the Auto Ticket Classification source
10	Machine Learning Model	Purpose of Machine Learning Model	Not specified; classification uses keywords in Short Description
11	Infrastructure (Server / Cloud)	Application Deployment on Local System / Cloud Local Server Configuration: Cloud Server Configuration :	ServiceNow Cloud Platform

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	List the open-source frameworks used	Not specified in the Auto Ticket Classification source
2	Security Implementations	List all the security / access controls implemented, use of firewalls etc.	ServiceNow platform access controls; specific controls not specified
3	Scalable Architecture	Justify the scalability of architecture (3 – tier, Micro-services)	Flow Designer automation reduces manual categorization and supports increasing ticket volume
4	Availability	Justify the availability of application (e.g. use of load balancers, distributed servers etc.)	ServiceNow platform; detailed availability architecture not specified
5	Performance	Design consideration for the performance of the application (number of requests per sec, use of Cache, use of CDN's) etc.	Automatic keyword analysis and categorization reduces manual processing time
