Problem-Solution fit canvas 2.0

Automatically classify school IT incidents at creation, reduce manual effort, improve ticket routing efficiency, and provide a no-code, easily maintainable solution.

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) — CS

Who is your customer?
i.e. working parents of 0-5 y.o. kids

Students and teachers using the school IT helpdesk for support requests.

6. CUSTOMER CONSTRAINTS — CC

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.

- Multiple support requests are received daily.
- Manual review is time-consuming and error-prone.
- The process is not scalable as requests increase.
- Tickets need structured and standardized data.

5. AVAILABLE SOLUTIONS — AS

Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking

Current solution: IT staff manually review each request, identify the issue type, select Category and Subcategory, and inform the caller about ticket creation.

Pros/cons documented: the manual process is time-consuming, error-prone, and not scalable. No other alternative solution is specified.

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

- Manually review each IT support ticket.
- Identify the issue type.
- Select the correct Category and Subcategory.
- Inform the caller about ticket creation.
- Handle issues such as Wi-Fi, projector, password/login, and slow computer problems.

9. PROBLEM ROOT CAUSE — RC

What is the real reason that this problem exists?
What is the back story behind the need to do this job?
i.e. customers have to do it because of the change in regulations.

The school IT helpdesk receives multiple support requests daily. Because classification is done manually by IT staff, increasing ticket volume makes the process time-consuming, error-prone, and not scalable.

7. BEHAVIOUR — BE

What does your customer do to address the problem and get the job done?
i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)

Students create a new IT support ticket by entering the Caller Name and Short Description. IT staff currently review the ticket and classify it manually.

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS — TR

What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.

A student or teacher encounters an IT issue such as Wi-Fi not working, a projector failure, a password/login problem, or a slow/hanging computer and creates a support ticket.

4. EMOTIONS: BEFORE / AFTER — EM

How do customers feel when they face a problem or a job and afterwards?
i.e. lost, insecure > confident, in control - use it in your communication strategy & design.

Not specified in the Auto Ticket Classification PDF.

10. YOUR SOLUTION — SL

If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality.
If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.

ServiceNow Flow Designer automatically classifies the incident at creation by evaluating keywords in the Short Description/Description. It assigns Category and Subcategory, uses dependent choices for consistent data, and sends an email notification to the caller. The solution is no-code, maintainable, and scalable.

8. CHANNELS of BEHAVIOUR — CH

8.1 ONLINE

What kind of actions do customers take online? Extract online channels from #7

ONLINE: Creating and processing an IT support ticket in the ServiceNow system is described; specific online customer channels are not separately specified.

8.2 OFFLINE

What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.

OFFLINE: Not specified in the Auto Ticket Classification PDF.

Extract online & offline CH of BE
